1. A method for preventing out-of-ordering of frames in a network switch, comprising the steps of:

receiving a first portion of a string of packets from a source port on a first port;
transferring said first portion of said string of packets to a second port for transmission to a destination;
sending a switch indicator from said first port to said second port;
receiving said switch indicator at said second port;
sending a response switch indicator from said second port to said first port in response to said receiving of said switch indicator at said second port; and
receiving a second portion of said string of packets from said source port on a third port, wherein said transmission of said first portion of said string of packets to the destination is performed after the response indicator is received at said first port.

3. A method for preventing out-of-ordering of frames in network switch, said method comprising the steps of:

receiving packets on a first ingress port from a source port;
transmitting said packets from said first ingress port to an egress port for transmission to a destination;
determining to switch said receiving of said packets to a second ingress port;
sending a switch indicator from said first ingress port to said egress port;
determining when to send a response switch indicator from said egress port to said first ingress port in response receiving said switch indicator at said egress port;

sending said response switch indicator from said egress port to said first ingress port;
forwarding said response switch indicator to said source port; and
switching said receiving of said packets to said second ingress port, wherein said transmission of said packets to the destination is performed after the response switch indicator is received at said first ingress port.

4. The method recited in claim 3, wherein said step of determining when to send a response switch indicator further comprises the step of waiting to send said response switch indicator until a number of packets in said first ingress port are transmitted to said egress port.
